DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 10-21, 30-32, 36 are drawn to an apparatus, classified in class 378, subclass 34
 - II. Claim 9, drawn to an apparatus, classified in class 250, subclass 504.R.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group II and Groups I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require a secondary plasma generating device at a location between the light source and the contaminant trap and it does not require the plasma generating device having antenna, wherein the antenna comprises an RF coil. The subcombination has separate utility such as a lithography chamber.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in

Art Unit: 1746

accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. During a telephone conversation with Mr. S. Harris, esq., on 02/02/07 a provisional election was made **without traverse** to prosecute the invention of Group II, claim 9. Claims 1-8, 10-21, 30-32, 36 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

EXAMINER'S AMENDMENT

6. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided

Art Unit: 1746

by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Harris, esq., on 02/02/07.

The application has been amended as follows:

Cancel claims 1-8, 10-21, 30-32, 36.

Response to amendment

7. All previous rejections and objections have been overcome by the amendment, filed 11/14/2006 in combination with the Examiner's amendment and the said objections and rejections are withdrawn.

Allowable Claims

8. Claim 9 is allowable over the prior art of record.

Reasons for Allowance

9. The following is an examiner's statement of reasons for allowance: The closest prior art of record is Visser (U.S. 6,753,941).

Visser teaches an apparatus comprising a light produced by plasma source; collector mirrors (optics); a contaminant trap made of metal foil and positioned between the light source and the optics. Visser fails to anticipate or suggest fairly an apparatus, wherein in addition to the structural elements similar to those instantly claimed, the

Art Unit: 1746

apparatus includes a power source to produce a potential difference between neighboring metal foil elements in the contaminant trap to attract the ionized particles to the metal foils. No other prior art that anticipates or suggests fairly the combination of structural elements as instantly claimed has been located as of the date of this office action. Therefore, claim 9 is allowed over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
